Technology(CBIT),Hyderabad.

Department of IT,EDAV

TITLE: CBIT/IT-1/EDAV/2025/CEP-17 Roll No:1601-24-737-021, Reshma Sulthana,
Analyze disease incidence rates across states and years for key diseases.

OVERVIEW: This analysis examines the incidence rates of major diseases such as malaria,Dengue,and measles,etc...across different states over multiple years.By normalizing incidence per 100k population comparisions across the states with different population sizes are made meaningful.

DataSet link: [Link](#)

ENVIRONMENT: python --version: Python 3.13.5 Libraries
Used:numpy,pandas,matplotlib

```
In [11]: import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
```

```
In [12]: df = pd.read_csv("C:\\Users\\Admin\\Downloads\\Diseases across states with year")
print("Inforamtion of dataset:")
df.info()
```

```
Inforamtion of dataset:
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 2880 entries, 0 to 2879
Data columns (total 7 columns):
#   Column                Non-Null Count  Dtype
---  -
0   state                 2880 non-null   object
1   region               2880 non-null   object
2   disease              2880 non-null   object
3   year                 2880 non-null   int64
4   cases                2880 non-null   int64
5   incidence_per_100k    2732 non-null   float64
6   population           2880 non-null   int64
dtypes: float64(1), int64(3), object(3)
memory usage: 157.6+ KB
```

```
In [13]: print("First 5 rows:")
df.head()
```

First 5 rows:

Out[13]:

	state	region	disease	year	cases	incidence_per_100k	population
0	Andhra Pradesh	South	Tuberculosis	2015	48926	42.16	116048524
1	Andhra Pradesh	South	Malaria	2015	69352	NaN	116048524
2	Andhra Pradesh	South	Dengue	2015	65130	56.12	116048524
3	Andhra Pradesh	South	HIV/AIDS	2015	97021	83.60	116048524
4	Andhra Pradesh	South	Measles	2015	79569	68.57	116048524

Q1: Calculate disease incidence mean (BL-3)

Here the .mean() function calculates the mean of the incidence per 100k of all states from the data. It helps to analyse the national-level disease incidences.

```
In [14]: mean_incidence=df["incidence_per_100k"].mean()
print("Disease incidence mean:\n",mean_incidence)
```

Disease incidence mean:
251.05704245973644

Q2: Filter data for specific diseases (BL-3)

Here .isin() function checks whether the disease is of malaria or dengue or measles and filters the data accordingly.

```
In [15]: Filtered_data=df[df['disease'].isin(["Malaria","Dengue","Measles"])]
print("Filtered data of dengue,malaria,measles:\n",Filtered_data)
```

Filtered data of dengue,malaria,measles:

	state	region	disease	year	cases	incidence_per_100k \
1	Andhra Pradesh	South	Malaria	2015	69352	NaN
2	Andhra Pradesh	South	Dengue	2015	65130	56.12
4	Andhra Pradesh	South	Measles	2015	79569	68.57
9	Andhra Pradesh	South	Malaria	2016	46764	92.30
10	Andhra Pradesh	South	Dengue	2016	2932	5.79
...	...	...	...	...	...	...
2866	Puducherry	South	Dengue	2023	22119	141.72
2868	Puducherry	South	Measles	2023	50769	NaN
2873	Puducherry	South	Malaria	2024	49073	42.02
2874	Puducherry	South	Dengue	2024	33783	28.93
2876	Puducherry	South	Measles	2024	51392	44.00

	population
1	116048524
2	116048524
4	116048524
9	50664892
10	50664892
...	...
2866	15607455
2868	15607455
2873	116792879
2874	116792879
2876	116792879

[1080 rows x 7 columns]

Q3: Impute missing incidence data (BL-4)

There might be empty places(NaN) in the data.So the .fillna() function comes into the picture to handle them. We can fill these empty places with a particular value/ mean of the column/median/mode,etc... This standardize the data for accurate analysis.

```
In [16]: print("empty incidence before imputing:")
print(df["incidence_per_100k"])

print("\nFilled incidence after imputing:\n")
print(df["incidence_per_100k"].fillna(mean_incidence))
```

```
empty incidence before imputing:
0      42.16
1      NaN
2      56.12
3      83.60
4      68.57
...
2875   53.21
2876   44.00
2877   37.39
2878   56.05
2879   45.36
Name: incidence_per_100k, Length: 2880, dtype: float64
```

```
Filled incidence after imputing:

0      42.160000
1    251.057042
2      56.120000
3      83.600000
4      68.570000
...
2875   53.210000
2876   44.000000
2877   37.390000
2878   56.050000
2879   45.360000
Name: incidence_per_100k, Length: 2880, dtype: float64
```

Q4: Group and summarize by disease and state (BL-4)

groupby() groups the dataset by disease and state. agg() applies multiple summary functions like count,mean,median,sum,max and min. reset_index() restores the grouped result as a DataFrame. This produces a detailed summary showing which disease dominate in which states.

```
In [17]: grouped_data=df.groupby(["disease","state"])

summarizing=grouped_data["incidence_per_100k"].agg(
    count='count',
    mean='mean',
    median='median',
    sum='sum',
    max='max',
    min='min').reset_index()
print("\n\nSummary of the data from incidence_per_100k column:\n",summarizing)

print("\n\nGrouped data by disease and states:\n")
for name,group in grouped_data:
    print("Group",name)
    print(group.head(5))
    print("-"*40)
```

Summary of the data from incidence_per_100k column:

	disease	state	count	mean	median	\
0	Dengue	Andaman and Nicobar Islands	9	411.835556	116.70

Q5: Plot incidence trends by region (BL-5)

The variable x stores the values of incidence per 100k column and y stores the names of different regions in the dataset. plt.title() gives the title for graph. We can give label for x-axis and y-axis using .xlabel() and .ylabel(). The bar graph can be printed by using .show() function.

```

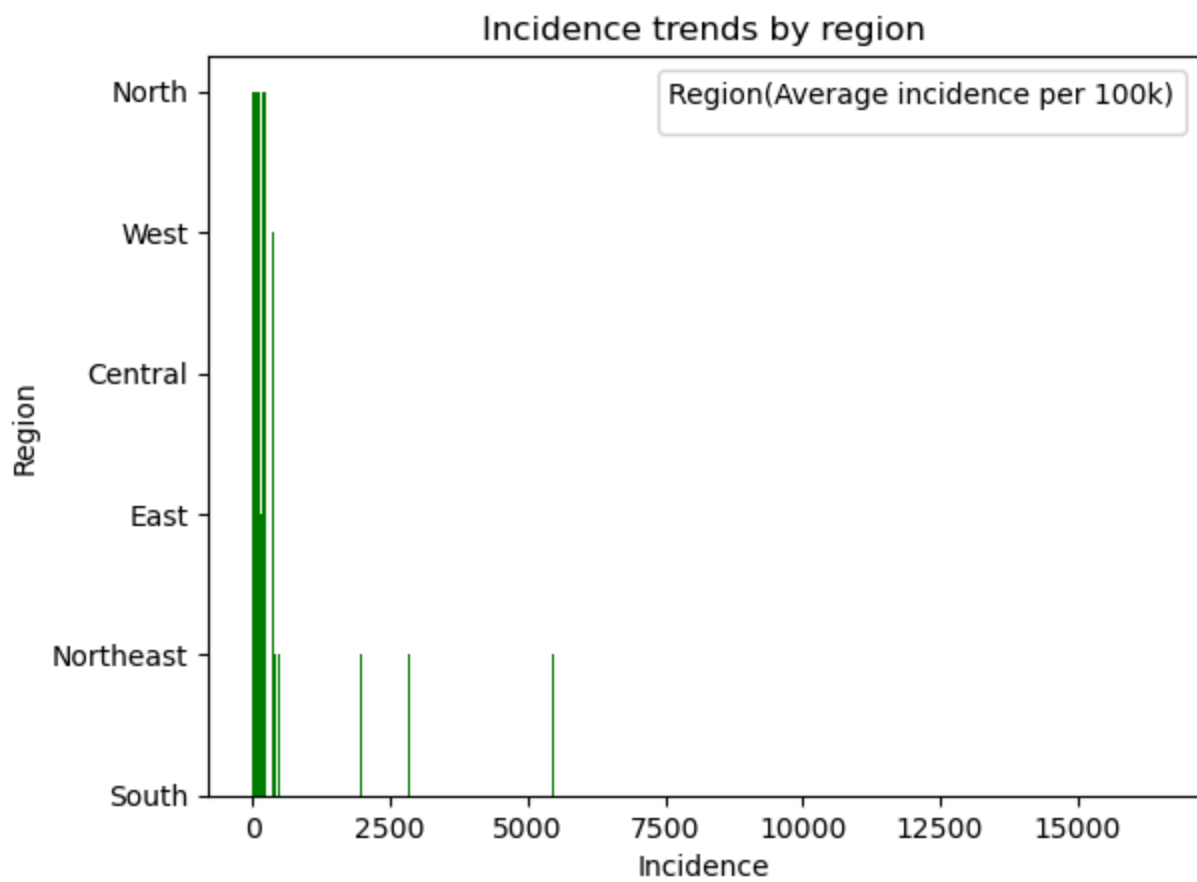

In [29]: x=df["incidence_per_100k"]
        y=df["region"]
        plt.bar(x,y,color='green')
        plt.title("Incidence trends by region")
        plt.xlabel("Incidence")
        plt.ylabel("Region")
        plt.legend(title='Region(Average incidence per 100k)')
        plt.show()

```

```

C:\Users\Admin\AppData\Local\Temp\ipykernel_4756\762570047.py:7: UserWarning: No artists with labels found to put in legend. Note that artists whose label starts with an underscore are ignored when legend() is called with no argument.
  plt.legend(title='Region(Average incidence per 100k)')

```

I got this data from internet.I reffered my class notes in time of difficulty of solving the problem.
